Report on Digital Learning

The uploaded photographs demonstrate the effective implementation of this initiative. The screenshots show **live online classes conducted through Google Meet**, where students actively participated in virtual lectures and discussions. These sessions were also recorded and made available for later access, allowing students to revisit important concepts at their convenience. The images further reflect students' active engagement in digital learning and the successful integration of ICT into the teaching-learning process. This MOOC-style approach significantly enhanced students' learning experience by promoting **self-directed learning, academic flexibility, conceptual clarity, and digital literacy**. It also supported blended learning by complementing classroom teaching with high-quality online educational resources.
